GALAPAGOS

A tale about the most unique
ANIMALS from the
Enchanted
Islands

Land & Sea

The giants of the islands, above and under
the surface - Pages 3 to 4

Into the Sky

Explore between the clouds to find an in-
finity of life - Pages 5 to 6

ABOUT the STUDENT

STEVEN HENDRIKSE is a 1st YEAR student of International Media Entertainment Management (Student ID: 141704, CLASS 2A) from Breda University of Applied Sciences.

He has created this magazine as part of an InDesign assignment for IMAGE EDITING class (PRO1-01). This assignment will be reviewed by the lecturer ROB VERHAGEN.

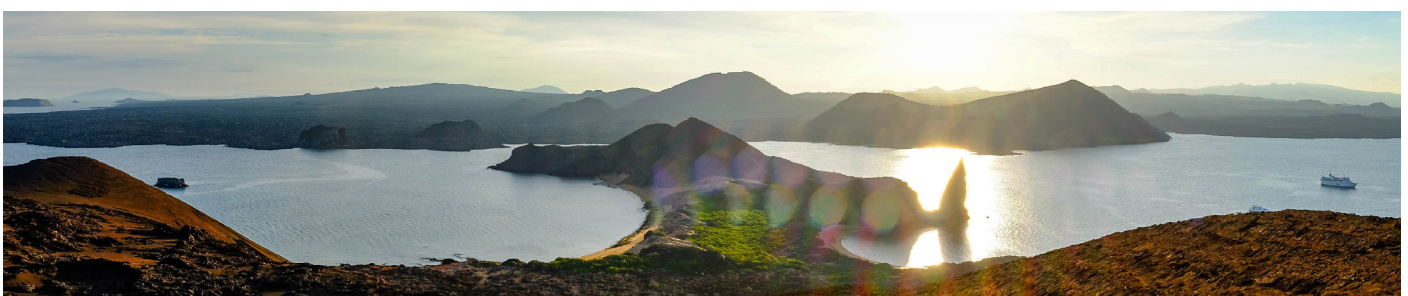

ABOUT THE MAGAZINE This magazine was created in order for the reader to appreciate the beauty of life in the Galapagos Archipelago. Therefore, pictures needed to take most of the space of the pages and to be as colourful as possible to impress the viewers.

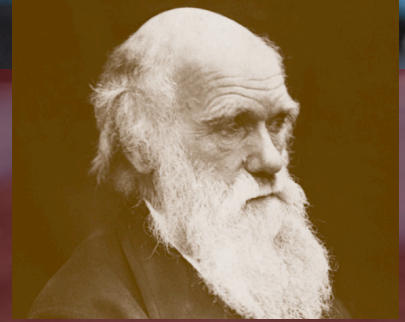

ABOUT DESIGN PRINCIPLES This work was created while considering some design principles. The design was intended to be as simple as possible, so that the magazine could be easy to read but most importantly, appreciate each of the pictures in it

1. Color scheme: color contrast was used when choosing the scheme. As the pictures are mostly filled with blues and greens (nature), red and yellow will stand out and be more noticeable. By this, it is possible to highline important text. The design is also consistent and repeats the color pattern through the whole document.

2. Allignment: the document uses a two-column design that repeats through the whole magazine. Using this format, pictures can be placed easier in specific locations to stand out from the text but still alligned to it ,so that it does not become hard to read either.

ABOUT THE TARGET AUDIENCE The magazine is intended for a wide audience; for people that want to appreciate the beauty of nature and those who wants to learn about it. Considering the possible content of the text, the magazine would suit a more mature reader, so it was designed for an audience of 16 years and older. Pictures can be appealing for the younger audience, so design principles were taken in consideration to make them stand out at all times (as described earlier).

*“It is not the strongest
of the species that
survives,
not the most
intelligent that
survives.*

*It is the one that is
the most adaptable to
change.”*

- Charles Darwin
